

Beartooth Ravine

West of Beartooth Falls is an extremely rugged area with steep topography. The area has four sharp curves with existing design speeds of 30 to 40 km/h (19 to 25 mph).

Existing Alignment Option

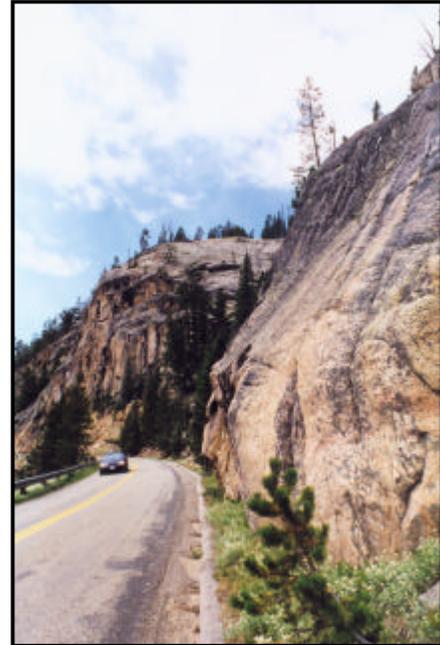

- Most closely follows the existing alignment.
- Has a design speed of 40 km/h (25 mph).
- Is a design speed exception.

Option A

- Uses a bridge to traverse the area.
- Has a design speed of 50 km/h (31 mph).
- Is a design speed exception.

Option B

- Uses a bridge to traverse the area.
- Has a design speed of 60 km/h (37 mph), which meets the proposed design speed for the western segment.
